NEON REMOVER PROFFESIONAL

Technical File

DESCRIPTION: NEON REMOVER PROFFESIONAL it is a special product based in different solvents not flammable. It can remove the film from the old paints. Can be used to remove alkyd paints, polyurethane paints and water base paints. Has very good penetration possibility and don't destroy the surface of the material.

COLOR: yellow and brown.

PREORDINATION: Before using control the surface if it is suitable to use REMOVER.

USAGE: Can be painted with brush or roller like it is (no need to dilute). After that need to stay up to the surface for a time 15-20 min. Normally during this period the old paint will peel off from the surface and will be easy to take out with a tool or with a cloth. If the surface is painted many times can be used a second hand.

WARNING: The application of paint on wet and unclean surfaces is not allowed. During application use suitable gloves to avoid skin contact with paint. If you are using a gun, make sure to wear a protective mask for the protection of your respiratory organs. If it contacts your eyes, you must rinse them with water and seek medical advice. The use of this paint is not recommended in temperatures less than 5°C. After completing the painting, the equipment should be washed immediately with white spirit.

TECHNICAL DATA:

- Color.....yellow and brown
- Drying time.....15 – 25 min

RISKINESS: NEON REMOVER is flammable. It should be used in the appropriate container to avoid environmental pollution. It should be kept away from children (S 2), irritates eyes and skin (R36 / 38). In case of contact with skin, clean immediately with plenty of water (S 28). In case of contact with eyes, rinse immediately with plenty of water and seek medical advice (S 26). Use gloves and mask during application (S 37/39).

PACKAGING: The packaging is done in cans of 0.75 L.
